

CLC Biocide Datasheet

CLC Biocide can be used to kill and remove mould and fungal growths. It's suitable for use with porous and ancient masonry as it does not leave salts or residues after application.

Application

It is easily applied by spraying onto surfaces using a hand operated or pressurised sprayer. Spray thoroughly across the entire affected area and completely saturate the surface. The surface may bubble or fizz, this is normal. Depending on the quantity of organic material; several applications may be required to completely clear the surface. Preparation of the surrounding areas is of vital importance; cover all glass surfaces, cover all wooden materials and cover anything that can stain or be bleached. Protect plants, animals and skin from contact with this cleaner.

On pigmented renders (self-coloured renders) apply a small test patch to make sure it will not affect the pigmentation of the render.

Health and Safety

Wear all appropriate PPE for handling commercial strength cleaners. This includes but is not limited to; Long sleeve clothing that you don't mind being discoloured, cover all hair, goggles, respirator, boots and gloves. For full details please obtain a MSDS.

Storage and Shelf Life

The Biocide should be kept in cool dark conditions; it should not be left in direct sunlight for extended periods. It has a shelf life of approximately 9-12 months if left unopened, however after opening we would advise its use within 1 month, it will likely still work after 1 month but it will have a much diminished cleaning/biocidal effect.

Disposal

Any unused cleaner be disposed of down the sink with plenty of water. Rinse the tub out well with warm water and recycle.
